Bodaq Digital Book

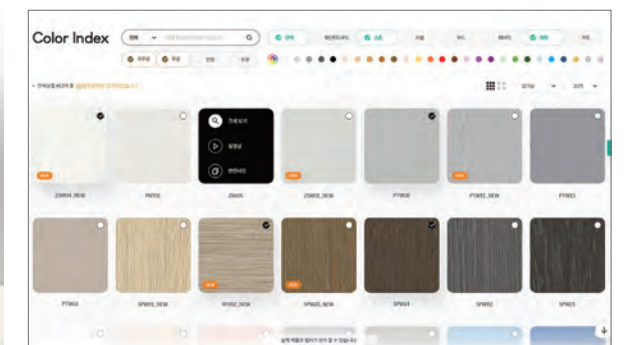

Introducing the Bodaq Interior Film Digital Sample Book

Simulation Explore how Bodaq Interior Film can be applied to various residential (kitchen, living room, bedroom, entrance, hallway) and commercial spaces (hotels, hospitals, offices, stores, cafes, banks, daycare centers) through simulations.

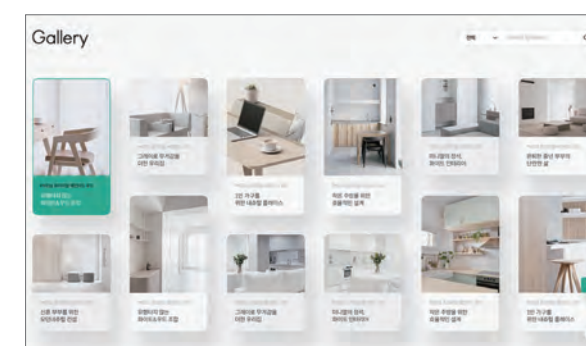

Online Showroom Experience the Bodaq online showroom, designed in a 3D VR panorama format.

Product Index Browse the full range of Bodaq products, including patterns, colors, full-width images, and pattern videos (full-width images and pattern videos available for select patterns).

Application Gallery Discover a variety of project examples that showcase how Bodaq products have been applied in real-world settings.

Customer Support Access installation guide videos, explore the digital sample book, and submit product inquiries with ease.

Interior Design Trends Proposed by Hyundai L&C

In the face of prolonged economic challenges and uncertainty, achieving extraordinary milestones has become more difficult. As a result, the importance of living a balanced and peaceful day is gaining more attention. At the same time, the concept of wellness—centered on both physical and mental well-being—is becoming more widespread, encouraging people to rethink what happiness means. This year’s In-Trend Seminar, themed “GOOD MOOD,” focuses on maintaining positive emotions. It explores the growing movement of wellness-focused consumers and examines how design trends are evolving across all aspects of life.

Commercial Space Proposal

#ComfortableOffice #FabricInterior #SubtleLuxury

Experience a refined and soothing office environment with the rich texture of **Natural Fabric NF902** and the cool, dark brown wood grain of **Long Wood LW119**. These elements come together to create a balanced space that is gentle on the eyes and exudes understated luxury.

Nordic Cabin Spaces that Foster Connection with Nature

Social Backgrounds Cold-climate Cachet / Nocturnal Life / No Tech		Wholegrain	SPW59
Design Keywords Cabincore Minimalist tones with natural wood interiors. Inside Out Open spaces designed to create a deeper sense of connection with nature.		Sepia	LW106
Resilience Shelters designed to protect life from extreme climates.		Italian Straw	SPW64
		Red Ochre	S252
		Pesto	S202
Color Warm and natural wood tones paired with deep browns and greens for a cozy ambiance.			
Material Wood finishes emphasizing natural grains and knots, complemented by soft fabric textures that create a warm atmosphere.			

Super High High-End Residential Spaces for Senior Generations

Social Backgrounds Life Curating / Age Positive / Well-aging		Lacquer	PNC52
Design Keywords High Rise Living High-rise homes offering stunning views that evoke pride and accomplishment.		Spumante	PNC43
Jewel Surface Premium finishes that act as jewelry-like accents within spaces.		Sepia Rose	VM905
Medical Spa Spaces integrating medical well-being into all aspects of life.		Windward Blue	VM904
		Tap Shoe	NS804
Color Luxurious beige tones creating an elegant atmosphere, accented with silver blue and deep black combinations.			
Material Cool and stately marble and metallic materials, balanced with warm, textured stone surfaces.			

Joy-conomy Spaces Dedicated to Ultimate Wellness

The Bodaq Super Matt Series is a premium product, featuring a unique surface texture treatment that offers exceptional resistance to everyday stains and scratches. It provides a gentle visual effect and a luxurious tactile experience, enhancing the sophistication of any space. Please note that the Fire Retardant and General versions are produced using different processes, resulting in variations in surface texture. (*Sample book reference: General version).

Long Wood
Origin Wood
Premium Wood
Standard Wood

Variety of changes made with wood full of sensibility.
Wood which never goes out of style is
an element that matches every space.
It is the most fundamental yet the most wide-ranged item.
We invite you to the world of wood which always presents a new
interpretation of the familiar grain, color and texture.
A majestic wood now decorates your space.

WOOD

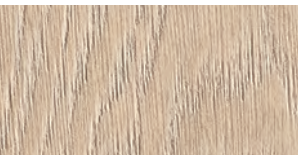

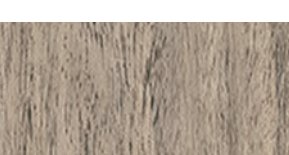

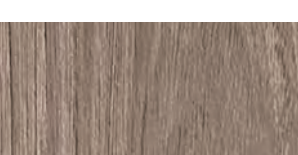

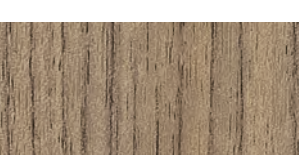

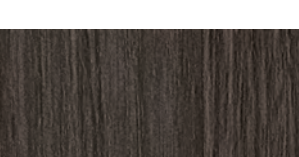

Long Wood

The Bodaq LW Longwood Series combines the luxury of SPW with an expanded range of printed patterns and an increased vertical width of 1,800mm, enhancing the elegance of spaces with high ceilings. Experience the grandeur of Long Wood through the LW Series.

Origin Wood

The Bodaq SPW Origin Wood Series features a premium surface coating and precise embossing, creating a more authentic wood texture. Pair SPW's luxurious finishes with a variety of colors and wood types for a refined and elegant look.

We Care for the Environment

Eco-Friendly Building Material Certification (HB Mark)

Bodaq interior films (general) use water-based adhesives and have earned the highest grade in harmful substance testing under the HB Mark certification, established by the Korea Air Cleaning Association for eco-friendly building materials.

Environmental Label Certification

The Bodaq Basic series (S, LS, PNC, PNT, SMT, ZSW / General) has received Environmental Label Certification as a phthalate-free and eco-friendly product. Certification details may vary by product line, so please refer to the technical documentation available on the Bodaq website.
(Purpose of Certification: Testing for the reduction of hazardous substances and environmental pollution in daily life.)

Environmental Product Declaration (EPD Certification)

Bodaq Interior Films have earned the EPD Certification, which evaluates the environmental impact across all production stages—raw material sourcing, manufacturing, distribution, usage, and disposal. Bodaq remains committed to ongoing improvements for environmental sustainability.

Atopy-Friendly Mark

Recommended and certified by the Korea Atopy Association, the Atopy-Friendly Mark is awarded after rigorous assessments based on test reports. Bodaq interior films have received this certification, ensuring they are safe for use, even for individuals with atopic conditions.

We Prioritize Safety

소방산업기술원

Flame Retardancy Performance Test

Bodaq's Fire Retardant interior Films are only labeled and sold as certified if they pass Flame Retardancy Tests conducted by the Korea Fire Institute (KFI). Test result reports for specific product lots are available upon request at local dealerships.

Flame Retardancy Performance [Certified by Korea Fire Institute]					Stain Resistance					
Char Length 20 cm or less	Charred Area 30 cm ² or less	After-Flame Time 3 seconds or less	After-Glow Time 5 seconds or less	Smoke Density 200 Ds or less						
Flame Retardant Certification					No Visible Changes Observed					

※ For test reports, construction specifications, and installation guides, please contact our headquarters or your nearest dealership.

Installation
Precautions

- Check the condition of the substrate (product name, product type, surface condition) before installation.
 - If any issues are found notify the supplier.
- For MDF, ensure the density is uniform, as differences in density can affect adhesion and stability during installation.
- Follow the recommended cleaning procedures for the substrate
 - For film covering and ABS doors, clean the surface of any contaminants and treat any damaged areas before installation.
※ When using sandpaper on ABS doors, avoid causing uneven surfaces.
 - For MDF, PB, and similar materials, smooth rough surfaces with sandpaper or putty before installation.
- Be cautious of color differences between production lots. It's best to avoid mixing lots during installation.
- When exposed to low temperatures during winter, the surface may crack, and adhesion strength may decrease. Take extra care.
- Avoid substrates with scratches or wax components, as these can reduce adhesion.

Primer Stage

- It is recommended to use Bodaq Primer, produced by Hyundai L&C, for optimal performance and stability.
- MDF, PB, and other wood materials have a high absorption rate, so 2-3 coats should be applied on cut edges.
- After applying the primer, allow at least 2 hours for it to dry thoroughly before applying the film.
※ Store Bodaq Primer (water-based) in a cool, shaded area, and do not use if the product has frozen. Take care during winter storage.

Installation
(Adhesion) Stage

- Maintain a room temperature (15°C-23°C) to eliminate any residual moisture on the wall.
- For products like SPW, LW, SMT, UMI, PNC, and PNT, which have special coatings, ensure the temperature is maintained before installation.
- When installing special products, apply primer, allow it to dry, and use extra pressure to finish the installation.
- Pay special attention to corners, as insufficient pressure may cause peeling.
- Avoid moisture and direct sunlight during installation, and do not use the film outdoors.
- During hot summer months, sealing the space after installation can lead to high temperatures, potentially causing bubbles or peeling.
To prevent this, ensure adequate ventilation throughout the process.

Product-Specific
Usage Considerations

SPW / LW Products (Premium Matte/Gloss Mixed Type), PNC / PNT Products (Deep Embossed Coating Type)

- Handle with care to prevent damage to the special coating layer during installation, particularly when fitting into corners.
- The surface features deep embossing, which may lead to tearing if subjected to excessive pressure or frequent removal and reattachment.
- Clean surfaces using mild detergent or water to avoid damage.

SMT Products (Matte Special Coating Type)

- The special coating may hinder the film's ability to slide during installation, so be sure to apply adequate pressure.
- Avoid contamination between the substrate and the adhesive surface to prevent marks or protrusions.
- The special coating may make overlapping installations difficult, so use caution.
- The product may not return to its original shape if wrinkled or marked, so handle it with care during storage and use.
- Be aware that F/R and General versions may have different surface textures.

RF Products (Woven Type)

- Be careful of scratches when using sharp tools due to the material's texture.
- The thick material may be difficult to bend or overlap, and cutting may be challenging.
- There is no film layer on the surface, so ensure careful use of the hard card to avoid surface damage.
- Tunneling may occur if the fabric is re-stretched after use.

NF Products (Fabric Type)

- The fabric material may unravel during cutting, leaving threads behind. Applying pressure with the hard card may be difficult.
- This product is designed for flat installations and may be difficult to bend or cut due to its thickness.
- Overlapping may be hard due to the water-repellent and F/R coating on the surface.
- Handle carefully to avoid surface damage, as there is no film layer on the surface.

VM/RM Products (Pearl Satin Finish)

- The pearl satin finish may show color variation depending on the distribution of pearl pigments on the film surface.
Excessive detachment after installation could cause peeling.

UMI Products (Premium Real Metal Type)

- The surface effect requires installation in a very clean environment to avoid marks or protrusions.
- If the product is wrinkled or marked, it cannot be restored due to its special structure. Handle with care during storage and use.
- This product is harder than standard products, so bending or overlapping may be difficult.
- Tunneling may occur if the fabric is re-stretched after use.

HS Products (High Gloss Type)

- Due to the high hardness of the product, sufficient pressure must be applied to prevent corner lifting. Use a soft cloth on the hard card to avoid scratching the gloss surface.

TNS Products (Deep Embossed Leather Type)

- The thick material requires sufficient pressure during installation to ensure proper bending and overlapping.

Other Precautions

- There is a risk of discoloration due to UV exposure.
- After installation, maintain room temperature for at least 1-2 days to allow the film to set properly.

For performance certifications and construction specifications, please contact Hyundai L&C.

Hyundai L&C / www.ebodaq.com
